

1. In March 2012, more than ten recalls were announced on Consumer Reports' website in less than a week. Consumer Reports is a non-profit group that has discovered security flaws that have exposed over 236 million data of US citizens since 2005. Retailers selling recalled products include, among other things, faulty wiring, fuel system difficulties, side airbags that don't work, and locked throttles. It also mentions problems with Gerber newborn food, Apple MacBooks, and a locking box that failed to lock.

2. The method tells you if you're making the best use of your funds. This became widely used in industry as a means of defining and controlling quality. The method also saves a lot of money and solves problems before they get bigger, and it aids in the establishment and maintenance of quality standards by preventing problems from occurring in the first place.

Related Jobs	Qualifications
